Dip-Dim™ Lighting Solution

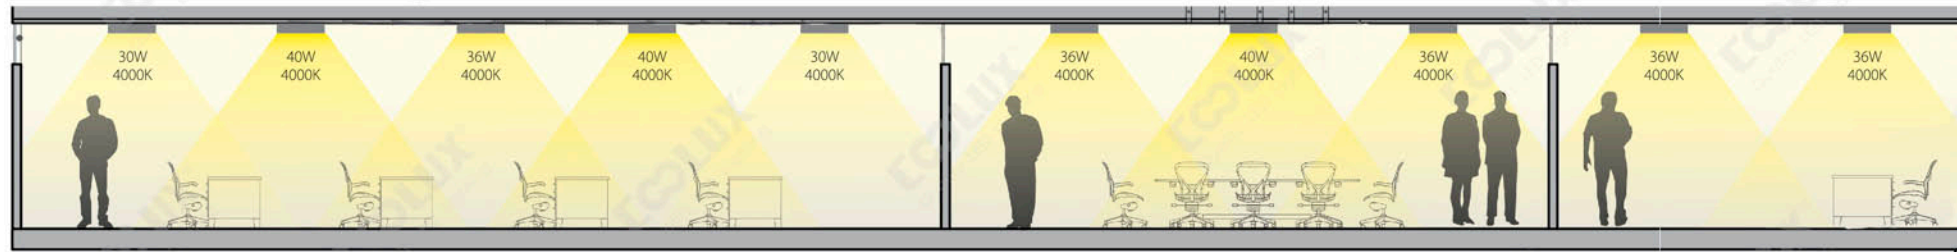

Dip Switch In Driver
To Set Power Or CCT

Lighting doesn't only mean to illuminate an object now, a people-oriented lighting environment matters more. The Dip-Dim™ series panel will be able to offer the users a pleasing and excellent lighting space, in the mean time, it would help the wholesale to reduce stock SKU and avoid money waste for excess inventory.

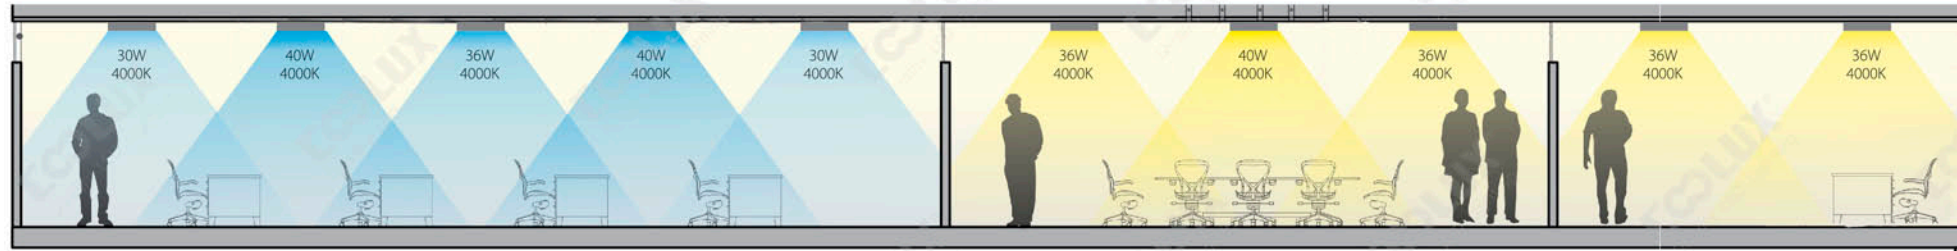

Regular Panel

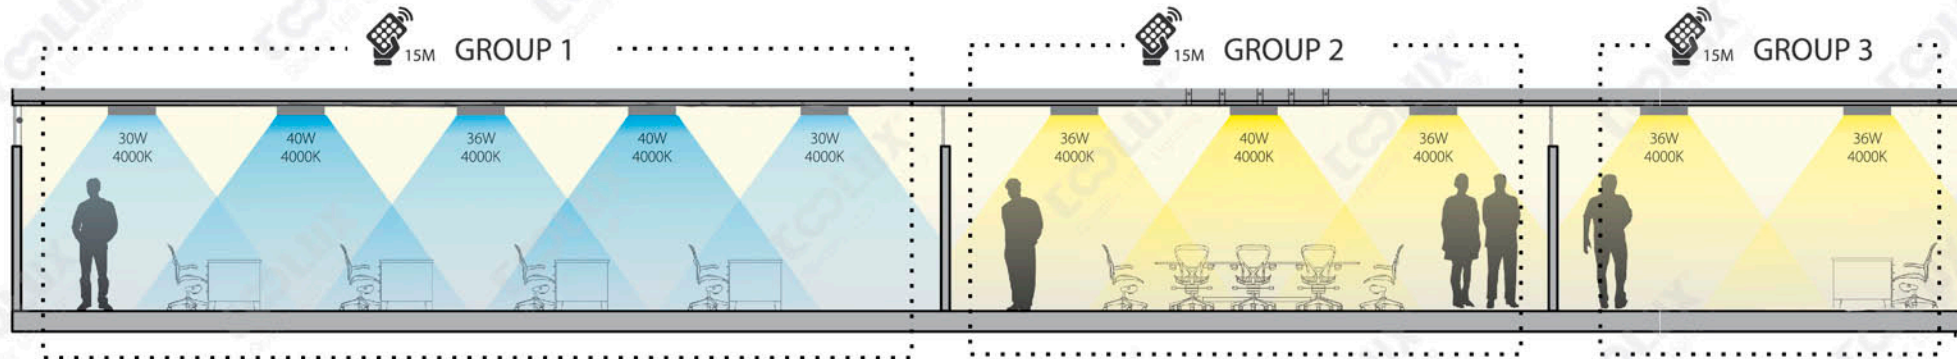

Power Dip-Dim™ Panel

Power+CCT Dip-Dim™ Panel

Power+CCT Wireless 2.4G Dim Panel

User View

All the panels are with same power and CCT, we don't need the same brightness and same CCT in mall, office, home etc, it's a waste of energy and it makes our eyes uncomfortable.

The Dip switch on driver can be used to set different power for the panel, we can adjust the power if we want to change it after buying.

If the CCT and power can also be switched easily, we can adjust it to different combination according to different situation, it would be nice if the product is with affordable price.

CCT+Power Wireless Dim Panel, The CCT and Power can be adjustable by remote control, it will be more convenient for the user.
- But the convenience may bring new troubles. Lots lighting space, through professional lighting design, no need constantly changing power and CCT. The market is small.
- the price will be much high than regular one.

Distributor View

To meet various demands, we need panels with different power and CCT in stock, it's not a small investments.

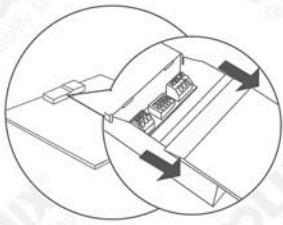

One panel light can be set to different power, so there will be less stock for us but more choices for customers. What a wonderful thing to choose Dip-Dim™ panel while the price is similar to the regular ones.

Dip-Dim™ panel is what the customers and I want.
- One panel, 3 color/ 4 wattages switchable, more valuable to the customers
- Significant reduction in warehouse management difficulty and cost
- Affordable price, big potential market

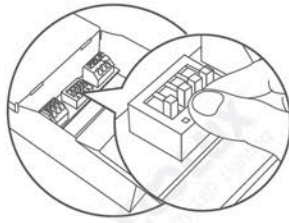

CCT+Power Wireless Dim Panel, like most smart lighting, because of its high cost, different manufacturers dimming scheme is not unified, this is not yet a mature market, currently only for users with special needs.

4 Wattage & 3 Color Dip Switchable

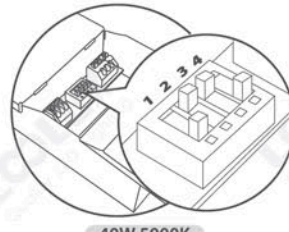

1 Slide the driver cover

2 Set up the Dip-Dim™ Switch to desired setting

3 Close the driver cover, start wiring

* Dimming Chart

	POWER		CCT		
	1	2	3	4	
30W	---	---	---	---	OFF
36W	ON	---	---	ON	3000K
40W	---	ON	ON	---	5000K
44W	ON	ON	ON	ON	4000K

* Details refer to user manual.
